and Yard for compliance with the Metrorail Safety Rules and Procedures Handbook (MSRPH), including Preventive Maintenance Inspections (PMI) activities. General
(MSRPH), including Preventive Maintenance Inspections (PMI) activities. General Recommended Finding
Information: o WMSC's team met with Shady Grove's Shift Supervisor, Inspection Office Remedial Action Required?
DescriptionSupervisor, CMNT mechanic, and CENV engineer. The following observations were conducted: Shop Equipment, Hazard, and Safety Observations o Received good support from the Shady Grove S&I Shop and Yard personnel. o Noticed that the S&I Shop was upgraded with LED lighting. o Noticed the proper use of blue flag protection. See Attachment #1. o Noticed the proper use of wheels chocks along with flags. o Finding #1 - Noticed left-over ties and a missing third rail cover by the S&I shop apron. These yard debris and missing third rail cover create a hazard for mechanics conducting daily inspection on railcars at night. See Attachment #2. Railcar Equipment o Noted observation. During PI inspections, the gear box on 7K series railcars is checked by pushing and pulling on the gear box along the axle. If the gear box experiences excessive play, then it is reported to Kawasaki for repairs. CMNT personnel stated that the gearbox on 7K railcars is supported by the wheel axle, while the gear box on legacy railcars is supported by the truck frame. This type of 7K cantilever support causes lateral movements of the gear box when is operating. o Current collector shoes are marked with the railcar number. This marking allows personnel to locate broken current collector shoes on the mainline and trace it back to a railcar. By determining the railcar number and location of the broken current collector shoe, the cause of the failure can be determined. See Attachment #3.Recommended Reinspection?

<sup>1</sup> The rail transit agency must provide WMSC with the necessary evidence (e.g. maintenance work order system records, photos, documentation, records, data, or other evidence) to close out the Remedial Action. Closeout of Remedial Actions may also be subject to ongoing WMSC verification inspections to ensure corrections are sufficient and effective.
